Subject: AFDW on core samples
Date: 07/31/2012 04:09 PM

Hi Gary and Erich:

I sent DEQ the Tobacco, Yaak, Hyalite Nutrient Monitoring SAP and Mindy had one comment to pass along:

While AFDW needs to be analyzed for samples collected using the hoop and template methods, it does not need to be processed on core samples because it can give false results due to organics in the sediment samples being ashed. I think you're already doing this but since it's not specified in the SAP, Mindy wanted to reiterate it.

Thanks guys,

Peter Brumm
